Scope

This is a current-state picture of Sokoni as a prepaid Kenyan P2P marketplace. Older files such as CONCEPT.md still describe an affiliate-mall idea (Kilimall, Jumia, AliExpress, Temu, Amazon). That is not how live catalog orders work today. Live catalog orders are local Kenya inventory, prepaid M-Pesa STK, and Sokoni escrow.

1. How to read this document

This document explains what Sokoni Mall is and how the public product handles buyers, sellers, riders, pickup partners, money, AI, and hosting. It is written for operators, partners, and anyone who needs a single source of truth without opening the repository.

What this edition deliberately omits

- API keys, access tokens, HMAC secrets, admin tokens, and SSH credentials.
- M-Pesa till numbers, Paybill numbers, and payout account names.
- Database connection strings, private IP addresses, and VM login details.
- Webhook secrets and step-by-step payment-portal verification.
- Anything that would let a stranger operate admin desks or move money.

Public contacts, BRS registration, storefront URLs, WhatsApp commands, escrow rules, and customer-facing fees are included because they already appear on sokonimall.com or in buyer/seller/rider knowledge.

2. What Sokoni is

Sokoni Mall is Kenya's prepaid peer-to-peer marketplace for brand-new and pre-loved fashion and lifestyle goods. Shoppers browse a Depop-style storefront at sokonimall.com or chat with **Sokoni Plug** on WhatsApp. Every catalog order is paid up front by M-Pesa STK. Sokoni holds the money in escrow until delivery is confirmed. There is no cash on delivery.

Pillar	How it works today
Legal name	SKN MALL KENYA — Business Registration Service number BN-36SM2YW9, registered 4 September 2026 under Cap. 499.
Trade name	Sokoni Mall / Sokoni Mall Enterprise. Countrywide Kenya — home delivery and pickup.
Channels	Website (browse, shops, checkout, track) + WhatsApp (order, pay, track, support).
Languages	English, Kiswahili, and Sheng.
Inventory	Local Kenya sellers only. Sokoni does not route orders to AliExpress, Temu, or Amazon.
Money	100% prepaid M-Pesa STK into escrow. Seller paid after confirmed delivery.
Tracking	SKN-#### parent orders; cart lines SKN-####-n; older SK-#### still work.

Mission, from the About page: make trusted local commerce feel as easy as texting a friend. Match buyers to real listings across Kenya, and hold every payment until the parcel arrives as described.

What Sokoni is not

- Not a cash-on-delivery courier marketplace.
- Not an overseas dropshipping storefront.
- Not a Next.js rewrite of the site — the storefront is static HTML plus vanilla JS.
- Not a place where riders or sellers collect payment at the door.

3. How the pieces connect

Two public hosts, one product. The website is the discovery, trust, and account layer. The bot is the commerce engine: catalog, WhatsApp, escrow, orders, sellers, riders, disputes, and admin APIs.

Layer	Host / surface	Job
Storefront	sokonimall.com	Static HTML/CSS/JS on Cloudflare. Browse, shops, legal pages, seller hub, boda apply, checkout UI.
Motion	website-motion → bundled JS	React + Framer Motion progressive enhancement. If it fails, the site still works.
Bot / API	bot.sokonimall.com	Node/Express: WhatsApp webhook, catalog, checkout STK, tracking, social inbox, seller APIs.
WhatsApp	WAHA on the production VM	Transport only. Numbered menus + free-text AI. WAHA admin is not public.
Payments	M-Pesa STK via Paystack; Daraja as fallback	Collections into escrow; seller and rider payouts after confirmation.
Data	File-backed orders plus optional Postgres	Orders, users, sellers, social, riders. Catalog can also live in products.json.

Typical buyer path: sign in on the site → browse or search → open a product sheet → order on WhatsApp or prepaid checkout → M-Pesa STK into escrow → SKN tracking → delivery OTP or YES confirmation → review or HELP if something is wrong.

4. The website

The storefront lives under website/ and deploys as static assets (Cloudflare Wrangler assets.directory). Catalog, auth, WhatsApp deep links, and checkout talk to bot.sokonimall.com. Brand voice: a trusted local shop assistant — warm, direct, honest — for shoppers countrywide. Green (#25D366) is for actions only. Surfaces are cream; headings are deep purple. Fonts: Fraunces (display) and DM Sans (UI).

Account gate

Home (index.html) uses a hard account gate: browse requires a signed-in email account unless the gate is set to soft or off. Always-public pages include login, signup, password reset, track, labels, legal pages, seller hub, public shop profiles, pickup-point pages, and boda apply. Soft-protected pages (inbox, activity, disputes, checkout) ask for login in gated modes.

Two login layers

Layer	How	Used for
Site account	Email and password via /api/account/auth	Browse gate, profile, purchases, inbox, activity.
Buyer WhatsApp OTP	/api/buyer/auth send + verify code	Offers and pay flows tied to a Kenyan phone.

Public pages

Page	Purpose
index.html	Catalog home: search, category rail, feed, new arrivals, how-it-works.
shop.html	Public seller shop by handle — listings, follow, reviews. No login required.
ask.html	Web chat with Sokoni Plug. Checkout still emphasized on WhatsApp.
login.html / signup.html	Email account. Signup redirects to the login signup modal.
forgot-password.html / reset-password.html	Password reset request and token form.
profile.html	Account hub: profile, purchases, saved items.
checkout.html	Prepaid checkout: order lookup, shipping, M-Pesa STK, accepted offers.
track.html	Public SKN/SK tracking timeline; optional rider map.
inbox.html	Buyer–seller messaging, offers, bundles, inspection actions.
activity.html	Likes, follows, notification preferences.
disputes.html	Buyer order-protection list.
label.html / qr.html	Printable prepaid drop-off label and QR waybill.
suppliers/list.html	Seller Hub: list, shop, KYC OTP, orders, ledger, withdraw, dispatch.
boda/index.html, apply.html, dashboard.html	Rider pitch, registration, command reference.
rider/scan.html	QR / pickup-code helper for riders.
pickup-points.html + apply.html	Pickup partner programme and application.
about, faq, trust-and-safety, terms, privacy	Company, help, legitimacy, contract, data protection.

Admin desks (admin-command, ops, support, finances, disputes, listings, shops, boda, riders) exist for staff. They are noindex and token-gated. This document does not describe how to authenticate to them.

Public API families the site calls

Base URL: https://bot.sokonimall.com. Names and purpose only — no credentials.

Prefix	Purpose
/api/products	Catalog list, detail helpers, likes.
/api/search	Product search.
/api/reviews	Sitewide reviews.
/api/feed	Home feed and anonymous engagement events.
/api/checkout	Order lookup, shipping, STK pay, labels.
/api/tracking	Shipment timeline and rider location.
/api/disputes	Buyer/seller disputes and inspection.
/api/account/auth	Email signup, login, session, profile, purchases.
/api/buyer/auth	WhatsApp OTP for buyers.
/api/social	Shops, follow, chat, offers, bundles, activity.
/api/seller/listings	Draft, AI studio, publish, bulk upload.
/api/seller/onboard	Seller OTP, orders, ledger, withdraw, dispatch.
/api/agent	Sokoni Plug web chat.
/api/pickup-points	Programme info, directory, applications.
/api/riders/register	Boda applications.
/api/trust/ticker	Social-proof strip on home.
/catalog-images/	Product images and video on the bot host.
/health	Bot health for ops (no secrets in this document).

5. The WhatsApp bot

The bot is a Node.js Express app in whatsapp-bot/. WhatsApp transport is **WAHA** (not Meta Cloud API). Shoppers use numbered text menus because interactive buttons are treated as unreliable. Free-text goes to Sokoni Plug after a command router that owns money, OTPs, and custody.

Four-tier brain

Tier	What it does
1. Command router	ACCEPT, PICKUP, CONFIRM, WAYBILL, PARTIAL_REFUND, pay, track, HELP, and role menus run as code before any model.
2. System prompt	Identity, safety, escrow and rider Stable Facts. The AI never enters OTPs or moves M-Pesa itself.
3. Dynamic context	Each freeform turn gets the user’s role and recent SKN orders.
4. Knowledge RAG	FAQs and SOPs from whatsapp-bot/knowledge/*.md (optional vector table).

Chat models are reached through a backend router (Groq, then OpenRouter, with optional Gemini). Shopper Plug tools run server-side with allowlists; the model is not given raw SQL or a free hand to release escrow.

Knowledge files the AI is grounded on

File	Topics
escrow-policy.md	Hold, inspection windows, refunds, AI prohibitions.
payments.md	STK / till fallback, no COD, buyer-visible fees.
returns-policy.md	Disputes, freeze, escalation.
buyer-trust.md	PIN safety, SKN tracking, official contacts.
seller-onboarding.md	SELL, Hub, pickup pin, shipping.
seller-payouts.md	Wallet, withdraw, promos, stock alerts.
vendor-terms.md	Accurate listings, no off-platform payment.
rider-onboarding.md	RIDER APPLY, documents, Nairobi/Thika.
rider-delivery.md	ACCEPT / PICKUP / CONFIRM, GPS, SOP.
rider-earnings.md	Holds, sweeps, limits. No rider withdraw command.
delivery-pricing.md	Metro rider formula vs upcountry seller rates.
shipping-sop.md	Buyer/seller steps, WAYBILL, AI limits.
location-pins.md	Seller, buyer, and rider map pins.
ai-architecture.md	The four tiers above.

6. Buyers

Buyers can start on the website or by messaging WhatsApp. No extra shopping app is required. The product they pay for is local Kenya inventory from Sokoni sellers, not an overseas marketplace cart.

Browse and decide

- Home catalog: category rail, search, Explore / Following feeds, filters (brand new vs pre-loved, aesthetics, price).
- Product cards show KES price, escrow/prepaid cues, and Order / Ask actions.
- Public shop pages by seller handle; follow, reviews, offers.
- Inbox for buyer–seller chat, offers, bundles, and media.
- Ask Sokoni Plug on WhatsApp or ask.html for catalog questions.

Order and pay

- Place an order on WhatsApp or web checkout. Provide name, phone, and delivery location (map pin when used).
- Receive an SKN-#### reference (cart lines SKN-####-n).
- Pay by M-Pesa STK prompt. Enter PIN only on the Safaricom prompt — Sokoni never asks for a PIN in chat.
- If STK fails, checkout may show a Buy Goods till. Reply paid with the M-Pesa code so Sokoni can verify.
- Never pay a rider, a personal number, or a till a stranger pastes in chat.
- Promo code SOKONI3: up to 3% off eligible prepaid orders during beta.

Receive and confirm

- Track on sokonimall.com/track.html or by typing the order id / track in WhatsApp.
- Local rider: inspect the parcel, then give the rider your 4-digit Delivery OTP. They send CONFIRM SKN-#### #### plus GPS within about 200 m of your pin.
- Upcountry courier: seller marks DISPATCH / WAYBILL; you reply YES SKN-#### after the parcel arrives.
- Inspect before you release. A photo of a problem during inspection freezes seller payout.
- Wrong, damaged, missing, or not as described: HELP SKN-#### or DISPUTE SKN-####. Claims up to 48 hours (Terms §7).
- After delivery you can RATE 1–5 (rider then seller when both apply).

Buyer money rule

Payment sits with Sokoni, not the seller. If the seller has not dispatched within 12 hours of payment, you are refunded and the seller is not paid. If a parcel is marked delivered and you do not have it, reply HELP with the SKN number so escrow stays held.

Multi-seller cart

The website bag can hold items from more than one seller. One parent SKN, one STK on the total, child lines SKN-####-n for fulfillment, commission, and escrow. Platform commission is per child line; the M-Pesa fee is charged once on the parent total. Sellers are notified only after payment succeeds. Track the parent or any child on the track page.

7. Sellers

Anyone in Kenya can list brand-new or pre-loved items. Zero listing fees during launch. Listings may go live instantly and are subject to post-publish moderation. Counterfeit, stolen, and prohibited goods are banned.

Onboarding

- WhatsApp: reply SELL. Chat collects shop name, handle, payout number, and a required pickup map pin. Messaging from the number proves the phone.
- Web: sokonimall.com/suppliers/list.html — WhatsApp OTP, shop name, optional @handle, optional National ID.
- A shop cannot be created without a pickup pin. That pin is one end of every local delivery price.
- Payouts: Seller Hub → Settings → Payouts. Buyers must never pay the seller’s personal till.

Listing and shop

- Upload photos, title, price you receive, condition, stock or size/colour variants.
- Vision draft: a cover photo can be turned into a listing draft by catalog vision models, then you edit and publish.
- Media studio can clean backgrounds and attach a short product clip.
- Promos are per listing (percent off that item), not a shop-wide sale in automated messaging.
- Public shop page at shop.html by handle; optional TikTok URL on the profile.
- Acceptable-use check (check_aup) flags prohibited content before it should go live.

Orders, dispatch, payout

- View orders in Seller Hub or WhatsApp (vendor menu).
- Local metro: Sokoni pins a rider after prepaid payment. Hand over only when the rider presents the Pickup OTP (PICKUP SKN-#### ####).
- Upcountry: DISPATCH SKN-####, then WAYBILL SKN-#### Courier Tracking plus two pre-shipment photos (packed + waybill, item before sealing).
- Printable drop-off label: label.html / GET checkout label.
- Payout after confirmed delivery — typically 2–3 business days after delivery status (Terms §12). Wallet shows Ready; WITHDRAW on WhatsApp or Hub payouts.
- PARTIAL_REFUND SKN-#### amount is available to authorized sellers within rules. AI must not invent refund amounts.

Seller shipping rates

Sellers set county/zone rates for **upcountry** courier. They do not set Nairobi-metro rider fees — those are platform distance prices. A seller who says they charge KES 200 for Nairobi is describing a courier rate that does not apply to Sokoni boda jobs.

8. Riders (boda)

Sokoni boda riders handle local metro deliveries after prepaid escrow. They never collect cash or M-Pesa from buyers. Jobs are auto-offered — there is no public job board. Operating towns for applications today: Nairobi or Thika.

Apply

- WhatsApp first: RIDER APPLY (also ride, rider, boda). Chat collects fields and photos.
- Web: sokonimall.com/boda/apply.html.
- Required: full name, Kenyan WhatsApp/M-Pesa phone, National ID, town, stage, bike plate, ID front photo, Class A licence, stage chairman letter.
- Optional (speeds vetting): ID back, logbook, Good Conduct, NTSA badge. Stage map pin is optional but helps nearby matching.
- Status PENDING → VERIFIED or REJECTED. Ops usually replies on WhatsApp within about 24 hours. Do not promise approval or earnings.

Live job commands (code, not the AI)

Command	Meaning
ACCEPT SKN-####	Claim the offered job. Atomic lock — only the offered rider wins.
PICKUP SKN-#### ####	Seller’s 4-digit Pickup OTP at the shop.
CONFIRM SKN-#### ####	Buyer’s 4-digit Delivery OTP at the door, plus GPS within ~200 m of the buyer pin.
DECLINE / NO_SHOW / VERIFY_RETURN	Ops paths for refused or returned jobs.
AVAILABLE / OFFLINE	Duty status. Live Location on WhatsApp when online.

CONFIRM needs two proofs: the buyer OTP (the rider is with the buyer) and a fresh GPS pin (the rider is at the address). OTP alone can be read over the phone; GPS closes that hole. Distance is recorded for later disputes.

Earnings

- Riders do not withdraw. After CONFIRM: 15-minute hold (buyer dispute window), then a sweep about every 30 minutes sends M-Pesa to the registered number.
- KES 200 minimum per payout (smaller amounts wait and batch). KES 5,000 per rider per day; overflow rolls to the next day.
- A single delivery fee above KES 1,500 is held for an ops check first.
- Under ~45 minutes since CONFIRM is normal. Under KES 200 owed is waiting for the floor.

9. Pickup points

Registered shops can hold prepaid parcels for customer collection. Apply at sokonimall.com/pickup-points and pickup-points/apply.html, or use pickup menu on WhatsApp. Terms §13:

- Physical shop with secure storage and regular hours.
- Hold parcels up to 5 days unless otherwise agreed.
- Commission per parcel (rate confirmed on approval); M-Pesa payouts on an agreed cycle.
- Release only after Sokoni confirms payment and sends a release notice.
- Customer name, phone, and order ID are confidential — use only to verify collection.
- Sokoni may approve, reject, suspend, or remove partners at its discretion.

10. Escrow, payments, and refunds

Prepaid escrow is the core of Sokoni. It protects buyers from fake goods and sellers from prank COD orders. Cash at the door leaves no record and no reverse path, so it is not offered.

Cycle

Step	What happens
1. Pay	Buyer pays listed price + delivery (where applicable) + banded M-Pesa fee via STK (or till fallback).
2. Hold	Funds sit in Sokoni escrow. The seller is not paid at checkout.
3. Dispatch	Seller packs. Local: pinned rider collects with Pickup OTP. Upcountry: courier + WAYBILL photos. 12-hour no-dispatch refund if nothing moves.
4. Inspect	Buyer checks the parcel. Photo of a problem freezes payout.
5. Confirm	Local: Delivery OTP via rider CONFIRM. Upcountry: YES SKN-####.
6. Release	After confirmation, or after the inspection window with no dispute, funds can move to the seller (and rider fee to the rider).

Inspection windows

- Local rider delivery: 24 hours from delivery (order autoReleaseHours may be more specific).
- Upcountry courier: 48 hours from delivery.
- Local rider fees also sit in a 15-minute hold before the rider is paid.

- Terms §7: wrong / damaged / not-as-described claims for up to 48 hours either way. If escrow already auto-released, the claim is still valid and support settles it manually. Never tell a buyer they are too late.

Accepted and refused payment rails

Accepted	Not accepted
M-Pesa STK push (default). **M-Pesa Buy Goods till when STK fails, then reply paid with the code.**	Cash on delivery. Paying a rider in cash or M-Pesa. Personal numbers or mystery tills in chat.

Disputes

HELP SKN-#### / DISPUTE SKN-#### opens a ticket, freezes seller payout, and asks for evidence photos. Buyers and AI open tickets; admins resolve them. Sokoni Plug must never quote a refund amount, never release escrow, and never promise a payout date. Refunds go back to M-Pesa when the claim holds. Liability on a given order is capped at the prepaid escrow amount for that order.

AI money rule

The language model does not move money. Command router, Paystack/Daraja callbacks, and staff-approved admin paths do. Shadow multi-agent advisors never auto-release escrow or pin riders.

11. Logistics and delivery pricing

Two different things are called delivery

Mode	Who carries it	Who sets the price
Local metro rider	Sokoni boda, auto-pinned after prepaid payment. Nairobi, Kiambu, and Machakos metro towns (Syokimau, Athi River, Kitengela, and similar).	Sokoni, by road distance between seller pickup pin and buyer pin.
Upcountry courier	Seller’s courier or parcel sacco. WAYBILL + two photos. No Sokoni rider.	The seller’s Hub county/zone rates.

Published metro rider formula

- KES 400 minimum covering the first 5 road km.
- KES 25 per road km after that.
- KES 1,500 ceiling, however far.
- Straight-line distance × 1.3 to approximate roads.
- If a pin is missing, the fee falls back to KES 400 rather than blocking checkout.
- Buyer pays the fee into escrow with the item. After CONFIRM, Sokoni takes a 10% platform cut, M-Pesa takes its B2C charge, remainder to the rider. On a KES 400 fee the rider nets KES 345.

Never quote a specific-order delivery figure in conversation. Checkout shows the exact amount before anyone pays. Typical delivery estimates on Terms: 1–5 days depending on location. Timeline on track: label → hub → in transit → pickup or delivered.

12. AI agents, sub-agents, and tools

Sokoni is not a single chatbot. Shopper chat, specialist lanes, background platform agents, an ops agent, and a shadow multi-agent layer sit on top of deterministic commands. Money and OTPs stay in code.

Sokoni Plug (shopper / seller assistant)

Used on WhatsApp and ask.html. After the command router, a specialist graph routes each turn into a lane with an allowlisted tool subset, then knowledge RAG, then a reply. Lanes: buyer, seller, dispute, logistics, general.

Lane	Typical tools
Buyer	search_products, browse_products, browse_taxonomy, get_product, track_order, get_order_label, list_orders, store_info, open_return_case, create_checkout_link, verify_payment_code
Seller	Onboarding, payout snapshot, listings, stock/price update, shipping rates, dispatch_with_rider, acceptable-use check, labels, track
Dispute	Track, labels, open_return_case, propose_goodwill (capped voucher proposal only), verify_payment_code
Logistics	Track, labels, shipping rates, dispatch_with_rider — no escrow release

Plug tools (names and purpose)

Tool	Purpose
search_products / browse_products / browse_taxonomy / get_product	Find and describe catalog items.
track_order / get_order_label / list_orders	Status, printable label URL, buyer order list.
list_seller_orders / listings / lookup_order_seller	Seller's orders, SKUs, who sold an order.
store_info	Policies, contacts, how-it-works facts.
open_return_case	Start a return/dispute case (does not pay anyone).
get_seller_onboarding / get_rider_onboarding	Signup steps.
get_seller_payout / get_shipping_rates	Wallet snapshot and rate matrix.
propose_goodwill	Bounded goodwill voucher proposal. Cap enforced in code.
create_checkout_link	Reserve + checkout/STK path.
update_inventory / dispatch_with_rider	Authenticated seller stock/price and dispatch notify.
verify_payment_code	Match an M-Pesa code to recorded webhooks.
check_aup	Prohibited listing/content check.

Ops agent (staff only)

A separate tool-calling agent for the command desk. It can read metrics, escrow status, disputes, catalog and policy search, and propose operational actions. The model still does not write SQL — every query is a named function with validated arguments. This document does not list staff authentication.

Platform fabric (background sub-agents)

Event-driven listeners in whatsapp-bot/src/agents/. Level 1 only: rate-limited seller nudges (for example a close, eligible offer) and reports to a main agent. Level 2 money movement is not started from these listeners. A proposal must be approved on an admin route that already owns payout and checkout.

- Inspection-window watcher — auto-release timing after delivery.
- Review nudge — ask for RATE after a completed order.
- Chat control / flagged messages — safety and abuse signals.
- Agent-actions queue — ops desk can see proposed actions.
- Output guard / heap guard — keep replies and process health in bounds.

Executive operating system

Staff roles (super admin, dispute manager, logistics lead, support agent) receive briefings and dispute action cards on WhatsApp. Natural-language and prefixed staff commands are intercepted in code before shopper AI. Voice notes from staff can be transcribed into those commands. Shopper Plug cannot use this palette.

MAS — multi-agent fallback (shadow)

An additive shadow layer for security heuristics, logistics advice, media last-resort, and optional chat/voice assist. Primaries stay Cloudinary / Remotion for clips and Groq/OpenRouter for chat. Transactional shadow never auto-releases escrow. Health endpoint reports whether MAS is in shadow.

Media, TikTok, voice

- Listing vision: photo → draft copy (vision models with fallbacks).
- Media studio: background cleanup and short product clips. Remotion worker on the VM is a fallback clip renderer so Chromium work cannot crash the bot.
- TikTok: optional posting of in-stock store products; featured IDs on the site. Private messages are not posted.
- Inbound WhatsApp voice: speech-to-text, then the same router as text. Optional outbound TTS only when a voice reply is requested.

13. Feature map

Area	What exists in the live product
Catalog	API-driven grid, browse menu (women, men, beauty, electronics, supermarket, auto, food, and more), demand tags, likes.
Social	Follow shops, inbox chat, offers, bundles, activity feed, shop reviews.
Search	Site search + Plug natural language (English / Kiswahili / Sheng).
Checkout	Web prepaid checkout, WhatsApp order, STK, shipping calculator, landmarks.
Tracking	Public track page, WhatsApp status, optional rider map.
Labels / QR	Printable waybill, rider scan helper, hub scan lifecycle.
Reviews	Sitewide + shop reviews; RATE after delivery.
Trust ticker	Social proof on home.
Promo	SOKONI3 3% cap; seller per-item percent promos.
TikTok	Optional product posting; seller profile link.
Pickup points	Apply, directory, hold-for-collection.
Boda	Apply, auto-dispatch, OTP custody, earnings sweep.
Account	Email account + WhatsApp OTP; forgot/reset password.
AI	Plug on WhatsApp and ask.html; ops agent for staff.
Admin desks	Escrow, finances, disputes, listings/KYC, shops, boda, support, live ops.

14. Catalog, SKUs, and order IDs

Identifier	What it is
Catalog product id	Opaque listing id (example pattern pt-…-001). Not the tracking code.
SKN-####	Parent order / tracking reference after checkout.
SKN-####-n	Child line in a multi-seller cart (fulfillment + escrow per seller).
SK-####	Legacy order ids. Still accepted on track and WhatsApp.

Master catalog is maintained on the bot (products.json and/or database). A build step publishes a public catalog to the website and strips private sourcing fields. Storefront listings use fulfillment store and payment prepaid. Paid orders consume stock. Daily affiliate-price sync still exists in the repo for older international catalog experiments; live FAQ states Sokoni does not sell AliExpress/Temu/Amazon orders.

15. About, FAQ, trust, terms, and privacy

These pages are the public contract. Summaries below; the live HTML is authoritative if copy changes.

About (about.html)

- P2P marketplace for brand-new merchandise and pre-loved fashion. Web + WhatsApp.
- Prepaid STK, escrow until arrival, SKN tracking.
- Sellers list at /suppliers/list; hub drop-off; payout after confirmed delivery.

- Registered office on the BRS record is not a claim that Sokoni only serves one town.
- Verify: SMS BRS to 21546, registration BN-36SM2YW9.

FAQ (faq.html)

- No COD, by design.
- Pay via STK; reply paid only if a confirmation code needs verifying.
- Escrow 24 h local / 48 h upcountry; Terms §7 covers 48 h claims either way.
- Local Kenya inventory only — no international marketplace routing.
- Sell via Seller Hub; SOKONI3 up to 3% in beta.
- Human help 7:30 AM–9:00 PM EAT via Talk to a Human on WhatsApp. AI help anytime on WhatsApp or ask.html.

Trust and safety (trust-and-safety.html)

- Is it safe? STK into escrow; seller paid after delivery; inspect before sharing the delivery code.
- How is money protected? 12-hour no-dispatch refund; HELP holds escrow if a delivery is fake or missing.
- Is it a scam? No — SKN MALL KENYA, BN-36SM2YW9, BRS SMS verification, published phone and email.

Terms of Service (terms.html, last updated 27 July 2026)

- §1–2 Founder-led launch; 100% prepaid marketplace; no COD.
- §3 Full listed price up front; escrow; seller payout after delivery; no hidden registration fees; promo cap 3% unless written otherwise.
- §4 Services: website, Plug, seller listings, tracking, pickup programme, optional social posts.
- §5 Accurate buyer details; fraud may be refused; local inventory only.
- §6 Delivery estimates 1–5 days; risk passes on successful delivery or authorized pickup collection.
- §7 Returns: contact WhatsApp within 48 hours of delivery; refund/replace from escrow at Sokoni’s discretion on evidence.
- §8 Acceptable use: no prohibited goods, spam, impersonation, or admin-system abuse.
- §9 AI may be inaccurate; confirm price and condition before ordering.
- §10 Liability limited to the prepaid escrow amount for that order; third-party networks (couriers, M-Pesa, WhatsApp, sellers) can fail independently.
- §12 Seller listings: accurate photos, legal goods, hub label, post-publish moderation.
- §13 Pickup point programme as in section 9 of this document.

Privacy Policy (privacy.html, last updated 27 July 2026)

Applies to sokonimall.com, WhatsApp, seller listings, and pickup applications. Sokoni does not collect M-Pesa PINs, card numbers, or passwords through WhatsApp or the website.

- Collected: WhatsApp messages needed to fulfill; order and escrow status; M-Pesa STK callbacks (amount, receipt, phone); reviews; listing photos and details; anonymous feed events; pickup applications; localStorage preferences; technical logs.

- Used for: orders, escrow, payouts, moderation, Plug answers, feed ranking, public reviews (first name + comment), optional TikTok of products (not private chats), fraud prevention.
- AI: message text plus catalog/order context. Local listings only. Chat history and phone numbers are not sold to marketers.
- Processors named on the page: WhatsApp/WAHA, Paystack, Safaricom Daraja, Cloudflare, AI providers, optional TikTok. Meta's WhatsApp policies also apply.
- Sharing: sellers and logistics only what they need to fulfill; authorities when required by law. Listing photos are public.
- Rights under Kenya Data Protection Act, 2019: access, correction, deletion via WhatsApp or support@sokonimall.com.
- Not directed at children under 13. Some processors may handle data outside Kenya where needed to run the service.

16. Infrastructure and the production VM

This section describes roles, not logins. No hosts, SSH keys, or secret names that unlock the machine are included.

Website hosting

sokonimall.com is a static site on Cloudflare (Workers/Pages). Root directory website/, empty build command, wrangler deploy of assets. Merges to main publish the storefront. There is no Next.js app router. website-motion is built separately into website/assets/js/sokoni-motion/.

Bot VM (production)

The commerce API and WhatsApp session run on a single Linux VM (documented production path: GCP e2-micro Always Free; Oracle Always Free ARM is the documented alternative with more RAM). Render is an optional split (bot-only, with WAHA kept awake elsewhere) and is not the main layout. There is no render.yaml in the repository.

Process on the VM	Role
nginx + TLS	Public HTTPS for bot.sokonimall.com. WAHA admin port is not exposed to the internet.
sokoni-bot (PM2)	Node Express: webhooks, APIs, AI, escrow logic.
WAHA (Docker, NOWEB)	WhatsApp session. Pairing stays on the VM or an SSH tunnel.
Postgres (optional Docker)	Users, social, riders, additive schemas. File-backed orders still used for live cart/escrow.
sokoni-remotion (PM2)	Loopback clip renderer fallback for listing videos.
Encrypted data backups	Orders/settlements archives on a schedule; Postgres volumes and WhatsApp session are separate restore stories.

Deploy: GitHub Actions on whatsapp-bot (and related) changes SSHes to the VM and runs the bot deploy script (install, migrate, restart PM2). WAHA is usually left running so the linked WhatsApp session is not dropped. Health checks hit https://bot.sokonimall.com/health (session linked or not is a status flag, not a secret).

Security posture (public-safe)

- Browser JS has no payment or admin secrets. Session tokens appear only after the user authenticates.
- CORS allowlists the storefront origin.

- WhatsApp webhooks are authenticated; unsigned posts are rejected when that check is on.
- Public APIs are rate-limited. Per-user WhatsApp rate limit (~10 messages/minute) stops spam from burning the LLM.
- Admin UIs do not belong in search indexes.
- Catalog pause and maintenance flags exist so ops can stop selling without redeploying the site.

Data concepts (no connection strings)

Users (buyer / seller / staff), sellers (shop slug, verification), products (condition, stock, public images, prices — private cost fields not exposed), orders and order items (status pending → paid → … → delivered / cancelled / refunded), payments, shipments/riders, disputes, social (follows, likes, offers, messages, reviews), audit logs on custody transitions. Order status changes after pickup or in-transit cancel are rejected unless forced by admin/dispute/no-show paths.

This documentation environment

This PDF was compiled by reading the Sokoni GitHub repository and public HTML pages. It does not include Cloud Agent, Cursor, or VM credentials from the machine that generated it.

17. Command reference

Everyone

Type or tap	Result
menu / hi / start	Main numbered menu; resets product browse.
1, 2, 3…	Choose a menu line.
track / status / SKN-####	Shipment timeline.
pay / retry / stk / lipa	Retry STK on an unpaid order.
paid	Ask Sokoni to verify a manual M-Pesa confirmation.

Buyers

Command	Result
YES SKN-####	Confirm receipt on non-rider / upcountry path.
HELP SKN-#### / DISPUTE SKN-####	Freeze escrow, open support.
RATE 5 (or 1–5)	Review after delivery.

Sellers

Command	Result
SELL	Start shop onboarding in chat.
vendor menu	Seller hub menu.
balance / WITHDRAW	Wallet and payout request.
DISPATCH SKN-####	Mark dispatched (optional rider hint).
WAYBILL SKN-#### Courier Tracking	Upcountry tracking + photos.
PARTIAL_REFUND SKN-#### amount	Seller-initiated partial refund within rules.

Riders

Command	Result
RIDER APPLY	Onboarding in chat.
ACCEPT / PICKUP / CONFIRM SKN-#### …	Job custody. OTPs are 4 digits.
DECLINE / NO_SHOW / AVAILABLE / OFFLINE	Duty and exception paths.

Pickup partners

pickup menu or pick up point opens the partner menu.

Staff # commands and executive force-release / refund palettes exist on configured phones only. They are not listed here.

18. Official contacts and verification

Channel	Value
Website	https://sokonimall.com
Bot / API	https://bot.sokonimall.com
WhatsApp / calls	+254 117 422 428 (wa.me/254117422428)
Email	support@sokonimall.com
Human hours	About 07:30–21:00 East Africa Time
Registered name	SKN MALL KENYA
BRS number	BN-36SM2YW9
Verify	SMS BRS to 21546, then the registration number
Registered address (BRS)	Murang'a Union Building, Thika–Kandara Road, P.O. Box 220, 01034 Kandara
Governing act	Registration of Business Names Act (Cap. 499, Sec. 14)

Do not invent contacts

Buyer-trust knowledge forbids extra emails, phones, or a city-only “head office” story. Use the table above. Never publish a till number on the storefront.

19. Glossary

Term	Meaning
Sokoni Plug	The WhatsApp / web shopping assistant.
Escrow	Buyer payment held by Sokoni until delivery is confirmed or a dispute is resolved.
STK	M-Pesa Sim Toolkit push — PIN entered on the phone, not in chat.
SKN	Sokoni order tracking prefix.
Pickup OTP	4-digit code the seller gives the rider at collection.
Delivery OTP	4-digit code the buyer gives the rider at the door.
Hub	Sokoni drop-off / scan point on the label timeline.
Seller Hub	suppliers/list.html — listing, orders, payouts.
WAHA	Self-hosted WhatsApp HTTP API running on the bot VM.
Path B	Keep vanilla storefront; add motion as a fail-soft bundle.
MAS	Shadow multi-agent fallback. Does not replace primaries; does not auto-pay.

Document control

Edition: public-safe platform documentation, 15 October 2026. Source: Sokoni repository (website/, whatsapp-bot/, docs/) and live legal HTML. If the site or bot change, regenerate from source rather than editing this PDF by hand. Older CONCEPT.md / WHATSAPP_FLOWS.md affiliate-mall chapters are historical.
